

## **WorkSite® Integration for Needles® by GDSI**

**Get full access to all client/matter related content stored in the Interwoven WorkSite document management system, right from Needles.**

### **About WorkSite® Integration for Needles®**

This add-in for Needles case management product allows all users to access Interwoven WorkSite documents related to a specific matter. The user will only see documents in which they have rights, and only those documents that pertain to the chosen client and matter. Once the hit list is returned, users will have the ability to open the documents, print the documents, and perform other WorkSite searches.

To use the integration, a user will search for a client and matter in Needles. Once selected, the user will choose the "documents" button in Needles. If any documents are found that meet the client and matter criteria, then a complete list will be shown to the user. This list is presented to the user in a WorkSite integrated dialog box.

### **Solution Highlights**
